INDIA'S EXTERNAL DEBT (at end-December 2011)

As per the standard practice, India's external debt data are disseminated on a quarterly basis. Statistics for the first two quarters of the calendar year (ending March and June) are compiled and released by the Reserve Bank of India, while the data for the last two quarters (ending September and December) are compiled and released by the Ministry of Finance, Government of India, with a lag of one quarter. In addition, Government of India brings out an annual Status Report on External Debt that contains detailed analysis of external debt position of the country. The major developments relating to India's external debt at end-December 2011 are presented below.

Major Highlights

- (i) At end-December 2011, India's external debt stock was US\$ 334.9 billion, recording an increase of US\$ 28.8 billion (9.4 per cent) over the level of US\$ 306.1 billion at end-March 2011. In rupee terms, it increased from ₹13,67,177 crore at end-March 2011 to ₹17,83,654 crore at end-December 2011, reflecting an increase of 30.5 per cent.
- (ii) The rise in external debt could largely be attributed to higher commercial borrowings and short-term debt. These two components together accounted for 84.7 per cent of the rise in total external debt at end-December 2011 over the level of end-March 2011.
- (iii) The valuation effect due to appreciation of US dollar vis-à-vis most major international currencies contributed a decline of US\$ 12.2 billion in the debt stock at end-December 2011 over the end-March 2011. This implies that excluding the valuation effect, the increase in debt would have been higher by US\$ 41.0 billion at end-December 2011 over the end-March 2011 level.
- (iv) Short-term debt (original maturity) accounted for 23.3 per cent of India's external debt while the remaining (76.7 per cent) was long-term debt. Component-wise, the share of commercial borrowings stood highest at 29.9 per cent in total external debt, followed by NRI deposits (15.7 per cent) and multilateral debt (14.9 per cent).
- (v) The share of Government (Sovereign) and non-Government debt in the total external debt were 24.3 per cent and 75.7 per cent respectively, at end-December 2011.
- (vi) The share of US dollar denominated debt was the highest in external debt stock at 56.9 per cent at end-December 2011, followed by the Indian rupee (18.6 per cent), Japanese yen (10.4 per cent), SDR (8.9 per cent) and euro (3.8 per cent).
- (vii) India's external debt to GDP ratio stood at 20.0 per cent at end-December 2011 vis-à-vis 17.8 per cent at end-March 2011.
- (viii) The ratio of short-term external debt (original maturity) to foreign exchange reserves increased to 26.3 per cent at end-December 2011 as compared to 21.3 per cent at end-March 2011.
- (ix) The ratio of concessional debt to total external debt declined to 14.4 per cent at end-December 2011 from 15.5 per cent at end-March 2011.

1. External Debt Stock

- 1.1 At end-December 2011, India's total external debt stock was US\$ 334.9 billion, reflecting an increase of US\$ 28.8 billion (9.4 per cent) over end-March 2011 estimates of US\$ 306.1 billion (Table 1). The long-term debt increased by US\$ 15.8 billion (6.5 per cent) to US\$ 256.9 billion, while short-term debt showed an increase of US\$ 13.1 billion (20.1 per cent) to US\$ 78.1 billion. Annex I and II present the quarter-wise disaggregated data on external debt outstanding for the period from March 2010 to December 2011 in Indian rupee and US dollar, respectively.

QE: Quick Estimates

Figures in parenthesis indicate their respective percentages to total external debt.

1.2 The increase in India's external debt at end-December 2011 over end March 2011 level was mainly on account of higher commercial borrowings and short-term debt. These two components together contributed 84.7 per cent of the total increase in India's external debt. The increase in commercial borrowings and short-term trade credits reflected improved access to global financial markets and the need for financing import demand.

1.3 Quarter-wise change in external debt position since March 2009 is given in Table 2 below.

2. Valuation Effect

2.1 The valuation effect* arises because external debt is denominated in different currencies, and the US dollar value which is the international numeraire for indicating debt numbers, fluctuates over time vis-à-vis other currencies. The US dollar has appreciated against most major international currencies between March 2011 and December 2011. Excluding the valuation effect, the increase in external debt between end-March 2011 and end-December 2011 would have been higher by US\$ 12.2 billion, to US\$ 347.1 billion (Table 3).

Table 3: Valuation Effect and Rise in External Debt

(US\$ billion)

1	2	3	4
External debt at end-December 2011	Total Variation over end-March 2011	Valuation Effect	Variation net of Valuation Effect (2-3)
	28.8	(-12.2)	41.0
334.9	Total Variation over end-September 2011	Valuation Effect	Variation net of Valuation Effect (2-3)
	11.0	(-7.1)	18.1

* The Valuation Effect during a period (e.g. end-March to end-December) is calculated by applying start-of-the-period (e.g. end-March) exchange rates to end-of-the-period (e.g. end-December) currency components of the debt stock and comparing the resultant figure with the nominal end-of-the-period (e.g. end-December) debt-stock.

3. External Debt by Original Maturity

3.1 At end-December 2011, long-term debt accounted for 76.7 per cent of total external debt. The long-term debt increased by US\$ 15.8 billion (6.5 per cent) between end-March and end-December 2011. The increase in long-term debt could largely be attributed to rise in commercial borrowings. Short-term debt, led mainly by trade related credits stood at US\$ 78.1 billion, reflecting an increase of US\$ 13.1 billion (20.1 per cent) over end-March 2011 level. The percentage share of different components in total external debt is presented in Table 4.

4. Government and Non-Government External Debt

4.1 At end-December 2011, Government debt stood at US\$ 81.2 billion, while non-Government debt amounted to US\$ 253.8 billion. The share of Government debt in total external debt declined from 25.5 per cent at end-March 2011 to 24.3 per cent at end-December 2011. The ratio of Government debt to GDP remained around 5.0 per cent in the last four years. Details of Government and non-Government debt are presented in Table 5 and Chart II. Creditor-wise details of sovereign external debt in Indian rupee and US dollar are placed at Annex III and IV, respectively.

Notes:

- (i) External debt to GDP ratio for the period ending June, September and December 2011 is based on the advance estimates of GDP for 2011-12 released by the CSO and is provisional in nature.
- (ii) From March 2005 onwards, Other Government Short-term external debt includes FII investment in Treasury Bills and from March 2007 onwards, it also includes investment in Treasury Bills by foreign central banks and international institutions.
- (iii) The increase in 'Other Government External Debt-Long-term' from 2010 onwards is on account of SDR allocations of SDR 3082.5 million on August 28, 2009 and SDR 214.6 million on September 9, 2009 and the consequent increase in cumulative SDR allocations to US\$ 6.2 billion at end-December 2009. SDR allocations fall in the category of 'long-term reserve-related liability' of the country to the other participants of the IMF's SDR Department.

5. Currency Composition of External Debt

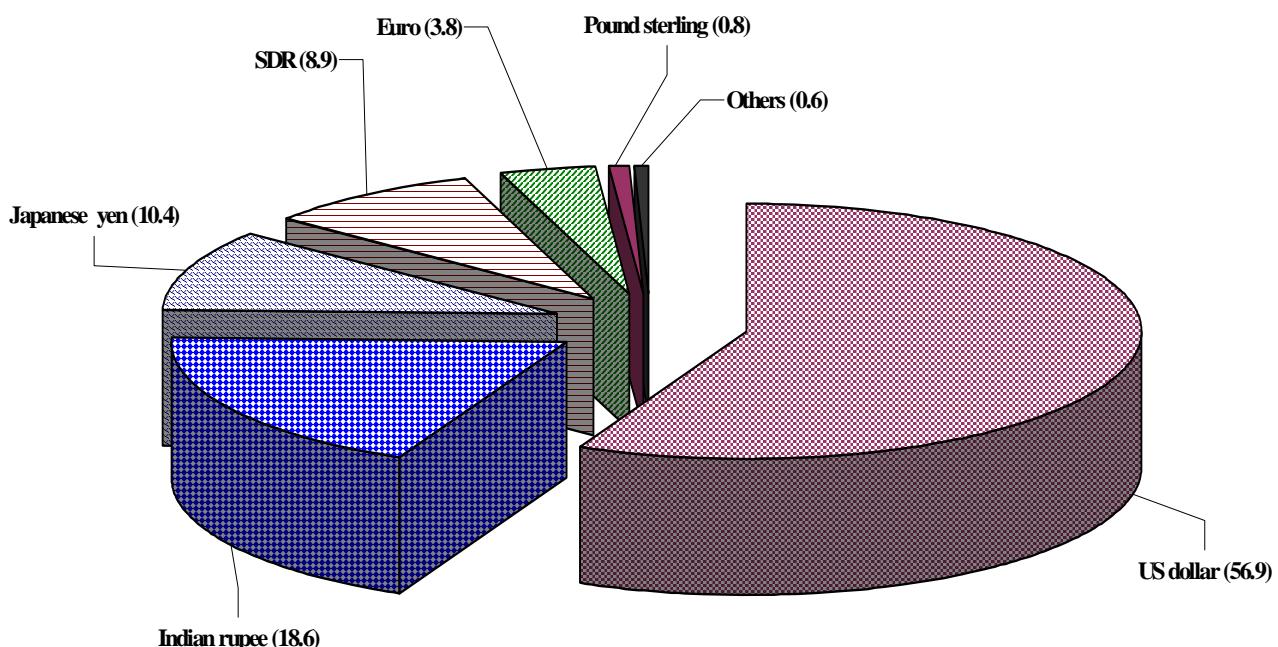

5.1 The currency composition of India's total external debt is presented in Table 6A and Chart IIIA. US dollar denominated debt accounted for 56.9 per cent of total external debt at end-December 2011, followed by the Indian rupee (18.6 per cent), Japanese yen (10.4 per cent), SDR (8.9 per cent) and euro (3.8 per cent).

Chart III A: Currency Composition of India's External Debt at end-December 2011 (per cent)

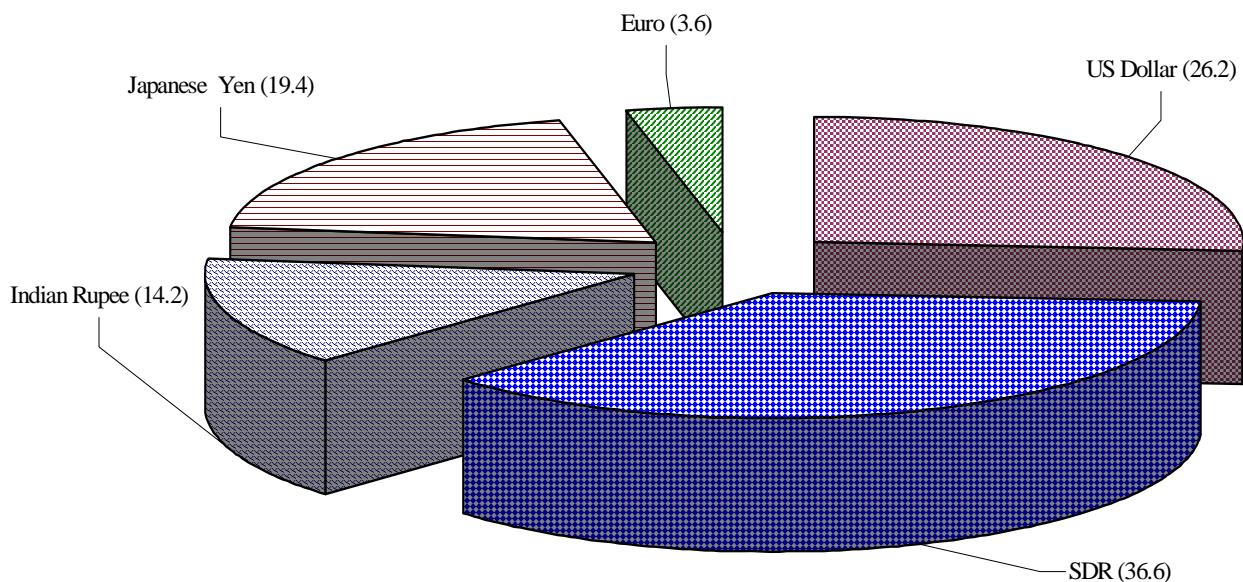

5.2 The currency composition of Government debt indicates pre-dominance of SDR denominated debt (36.6 per cent), which is attributed to borrowing from International Development Association (IDA) i.e., the soft loan window of the World Bank under the multilateral agencies and SDR allocations by the International Monetary Fund (IMF). Share of US dollar denominated debt was 26.2 per cent at end-December 2011, followed by the Japanese yen (19.4 per cent) (Table 6B and Chart IIIB).

6. External Debt Indicators

6.1 India's foreign exchange reserves provided a cover of 88.6 per cent to the external debt stock at end-December 2011 (99.6 per cent at end-March 2011). The ratio of short-term to total external debt stood at 23.3 per cent at end-December 2011 (21.2 per cent at end-March 2011) while the ratio of short-term to foreign exchange reserves was 26.3 per cent at end-December 2011, as compared to 21.3 per cent at end-March 2011. The ratio of concessional debt to total external debt declined to 14.4 per cent at end-December 2011 from 15.5 per cent at end-March 2011, reflecting the increasing share of non-Government debt. The key external debt indicators are presented in Table 7 and Annex V.

(ii) External debt to GDP ratio for the period ending June, September and December 2011 is based on the advance estimates of GDP for 2011-12 released by the CSO and is provisional.

7. International Comparison

7.1 A cross country comparison of external debt of twenty most indebted developing countries, based on the data given in World Bank's publication titled Global Development Finance, 2012 which contains the debt numbers for the year 2010 and has a time lag of two years, showed that India was the fifth most indebted country, after the China, Russian Federation, Brazil and Turkey in 2010 in terms of stock of external debt. The ratio of India's external debt stock to gross national income (GNI) at 16.9 per cent was fourth lowest with China having the lowest ratio at 9.3 per cent (Table 8).

7.2 In terms of the cover of external debt provided by foreign exchange reserves, India's position was fifth highest at 103.5 per cent after China, Thailand, Malaysia and Russia. A comparison of the share of short-term debt in total external debt across countries reveals that India's position was eighth lowest with Pakistan having the lowest ratio.

7.3 The Quarterly External Debt (QEDS) database, jointly developed by the World Bank and the International Monetary Fund, brings together detailed external debt data of countries that are subscribing to IMF's Special Data Dissemination Standard/General Data Dissemination System. The position in respect of the highly indebted developing countries and subscribers to this arrangement for the second and third quarters of the calendar year 2011, which has been published by the World Bank [<http://go.worldbank.org/GWMYALHYQ0>], is placed at Annex VI.

8. External Debt Management

8.1 India's external debt has remained within manageable limits due to prudent debt management policy that emphasizes raising sovereign loans on concessional terms with longer maturities, regulating external commercial borrowings through end-use and all-in-cost restrictions, rationalizing interest rates on Non Resident Indian (NRI) deposits and monitoring long as well as short-term debt.
